

Plan

- Discuss about your work task
- Think about the practical scenario and identify the problems that users face.
- Split your work with your friend (frontend/backend or components wise)
- Identify the requirements (functional and non-functional)
- Stick with your time frame

Database Design

- Identify Entities and the attributes
- Draw ER diagram (use [Lucid Charts](#))
- Make your MySQL Database (use [XAMPP](#))

Application Design

- Draw application sketch (use rough papers and pencils)
- Think about the users and UX (usability , accessibility)
- Finalize the design
- Draw your final wireframe (use AdobeXd or Figma)
- Design wireframes (optional)

Development

- Develop your User Interfaces (Learn Bootstrap)
- Use web templates (do not waste your time)
- Use These Resources
 - <https://colorlib.com/wp/free-html5-admin-dashboard-templates/>
 - <https://www.cssscript.com/tag/dashboard/>

**** Try to Finish this within first 10-14 Days ****
